

Project Initialization and Planning Phase

Date	25 June 2026
Team ID	
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Customer Problem Statement:

The OptiCrop project aims to solve the challenges faced by farmers in selecting the most suitable crop for cultivation. Crop selection often depends on experience rather than data, resulting in low productivity and financial losses. OptiCrop uses Artificial Intelligence and Machine Learning to analyze soil nutrients, weather conditions, rainfall, temperature, humidity, and soil pH to recommend the most suitable crop. This enables farmers to make informed decisions and improve agricultural productivity.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer	Select the best crop	I don't know which crop is best suitable	Traditional farming depends on experience	Uncertain about crop productivity and profit
